Software Engineer with 7+ years of experience building full-stack web applications, scalable REST APIs, data pipelines, and AI-powered features. Proven track record shipping production systems on edge infrastructure, integrating third-party APIs, and delivering end-to-end from architecture through deployment.

SKILLS

Languages: Java, Scala, Go, Python, JavaScript, TypeScript

Frameworks & Tools: React, Node.js, Spring Framework, Play Framework, Cloudflare Workers, Hono, Kafka, Microservices, AWS, SQS, DynamoDB, PostgreSQL, MSSQL, SQL, NoSQL, D1 (SQLite), Docker, REST APIs, OAuth2, SAML 2.0, JWT, Vitest, Git, GitHub Actions, CI/CD, Jenkins

EXPERIENCE

Software Engineer

2022 - Present

Brad Paws, San Francisco, CA

- Architected a full-stack client portal on Cloudflare Workers (React 19, Hono, D1, KV, R2) serving two custom domains from a single edge Worker with zero origin servers and sub-millisecond reads.
- Built a multi-source data pipeline integrating Notion, Google Calendar, Gmail, and Venmo APIs with idempotent deduplication and cursor-based commit semantics, eliminating manual payment reconciliation.
- Developed a production AI chat agent (Claude Haiku, Vercel AI SDK, 10 tools) and a standards-compliant MCP server with full OAuth2 + PKCE authorization for external AI agent integrations.
- Wrote 1,180+ Vitest tests across 91 files achieving 100% server-side statement coverage, with GitHub Actions CI gates on every push and Cloudflare auto-deploy on merge.

Software Engineer

2022

Front, San Francisco, CA

- Redesignated cross-functional Node.js microservice architecture of a two-way sync system handling 1.1M requests/hour using a priority-based Go scheduler and Kafka streams to increase accuracy and reliability for all email webhooks.
- Developed and deployed a Node.js REST API for account-based rules, driving a 30% increase in adoption.
- Optimized contact CSV importer for incremental file uploads while preserving historical customer data, leading to a 5% reduction in processing time.
- Performed critical security upgrade of core JavaScript email library responsible for sending over 200,000 outbound emails/month.

Software Engineer

2019 - 2021

Total Brain, San Francisco, CA

- Spearheaded the design and implementation of a Scala backend integration system for Apple, Google, and Facebook authentication platforms resulting in a 60% increase in new user sign-ups.
- Orchestrated the migration of user data from a legacy MSSQL database to DynamoDB, implementing a modernized NoSQL schema while achieving a 50% reduction in overall API response times.
- Improved query throughput by 50% through implementation of an in-memory caching layer for DynamoDB tables.
- Increased developer productivity by 70% with a Jenkins CI/CD pipeline for all backend systems while increasing observability.
- Automated and streamlined the release process by 75% utilizing Jenkins pipelines and bash scripts.
- Integrated HubSpot APIs to synchronize critical customer and lead data, enhancing customer success, sales, and product experiences.
- Standardized and optimized SSO systems for SAML 2.0 and JWT, streamlining enterprise client onboarding.

Software Engineer

2017 - 2018

Salesforce.com, San Francisco, CA

- Designed and implemented a persistent repository for internal state during integration test execution using Java, PostgreSQL, and EclipseLink.
- Created an OAuth2 security filter to manage access control of Microservice APIs, integrating with a remote service for identity validation.
- Designed and implemented a management UI for Microservice Testing using React.
- Served as Technical Project Manager for config builder and validator, ensuring on-time delivery by prioritizing milestones and communicating with stakeholders.

EDUCATION

DePauw University — Bachelor of Arts in Computer Science

2017
